2 Introduction

The Snapdragon SDK Early Access TestApp contains sets of tests that validate the platform implementation of the feature API, supporting software, on a device.

Manufacturers can use the TestApp to validate that their devices support the feature interface prior to release of the device to the ecosystem. Developers can use the TestApp to determine the level of support on the device they are developing to.

The TestApp will be updated to be in sync with each release of the Snapdragon SDK. More information regarding the use of the TestApp may be found in the user guide.
